

Nikkormat FT_N

(31F3B)

REPAIR MANUAL (REVISED)-1

NIPPON KOGAKU K.K.

Tokyo, Japan

(70.10.d) H

C O N T E N T S

| | Page |
|---|---------|
| 1. Illustrations (Fig.1 - Fig.13a) | 1 - 28 |
| (including Fig. 2a, Fig. 3a, Fig. 4a, Fig. 5a, 5b Fig. 6a, 6b, 6c, Fig. 9a, 9b, 9c, Fig. 10a, 10b Fig. 12a, Fig. 13a) | |
| 2. Parts List | 29 - 64 |
| 3. Subassembly List | 65 - 70 |
| 4. Nikkormat FT _N Exposure Meter | 71 - 81 |

NOTE:

1. (a) Parts (or subassemblies) numbers 31FB - .. :

For the parts (or subassemblies) commonly used for
Nikkormat FT_N, FT and FS.

(b) Parts (or subassemblies) numbers 31F2B - T.. :

For the parts (or subassemblies) exclusively used for
Nikkormat FT_N and FT.

(c) Parts (or subassemblies) numbers 31F3B - .. :

For the parts (or subassemblies) exclusively used for
Nikkormat FT_N.

2. Marks in the "Term of Sale" column of the parts list are:

.... Can be supplied individually

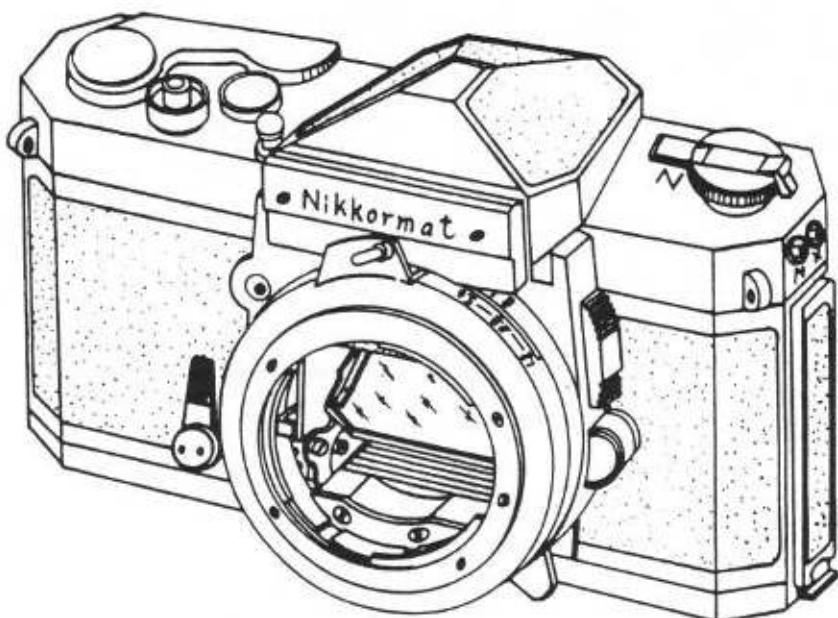

.... Not supplied individually but only as subassembly

.... Supplied either as part or subassembly

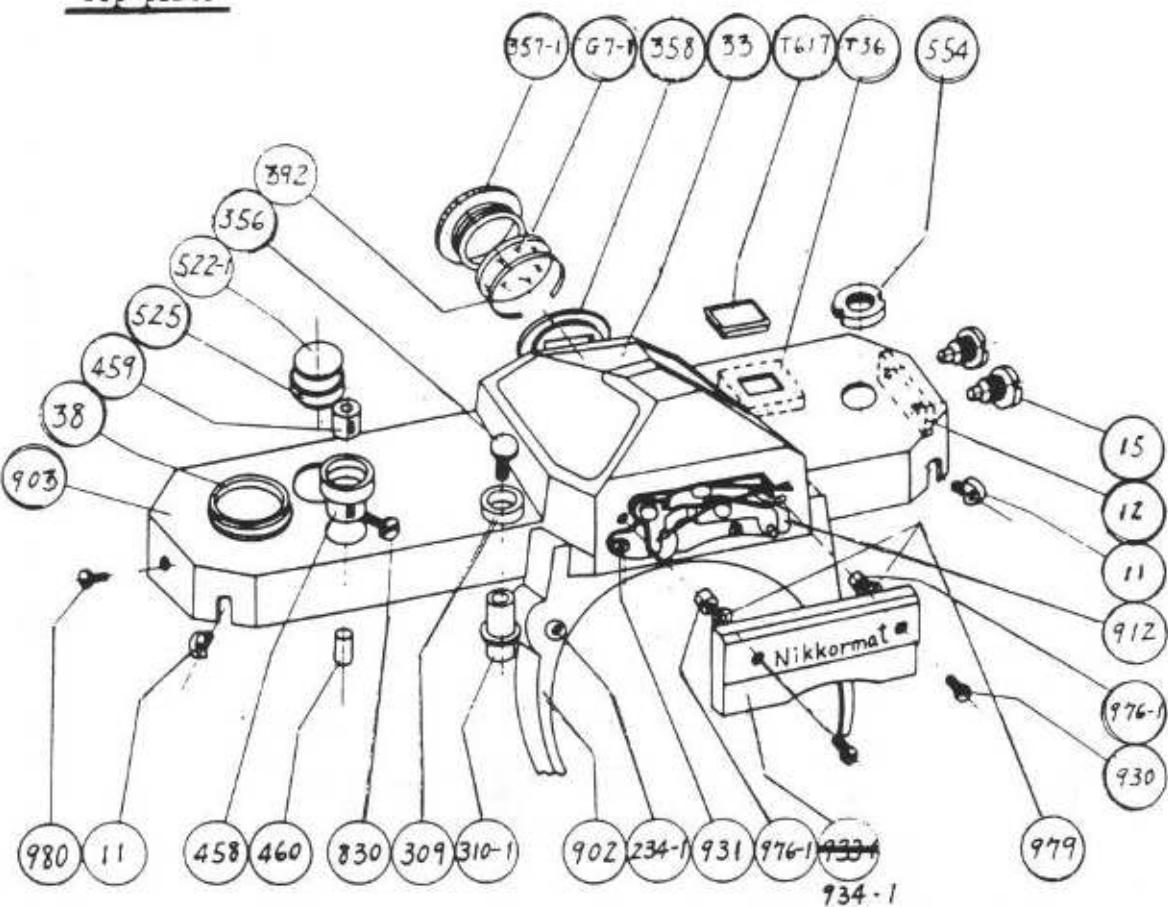

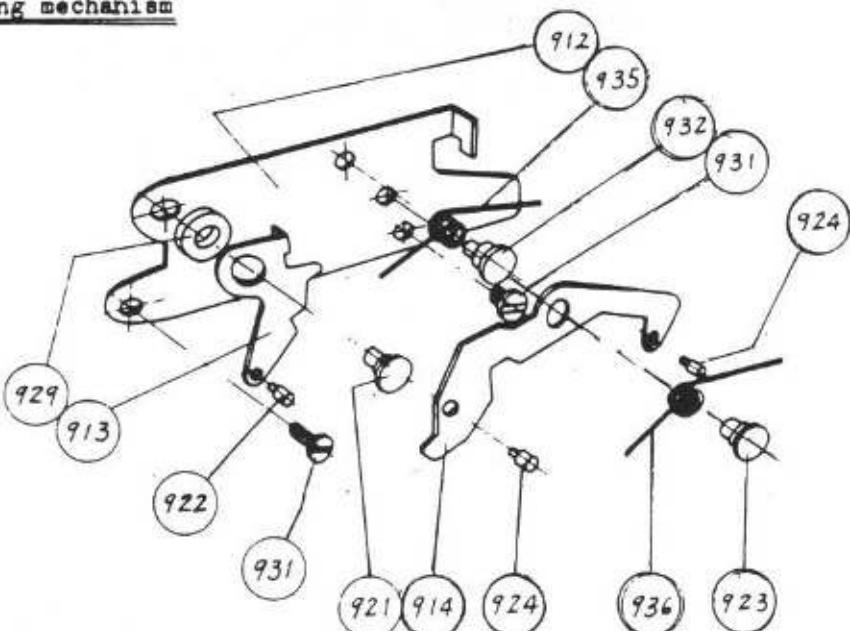

.... Not considered as repair part

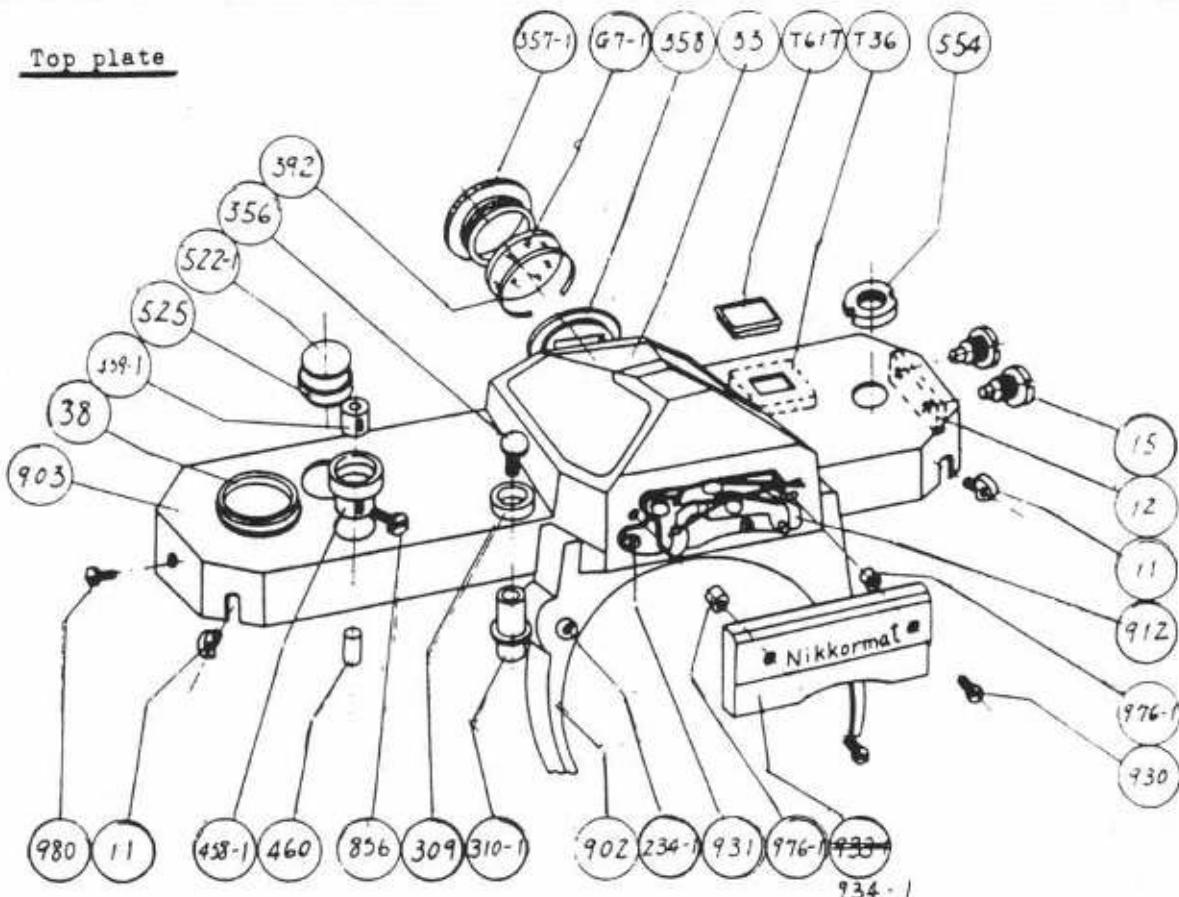

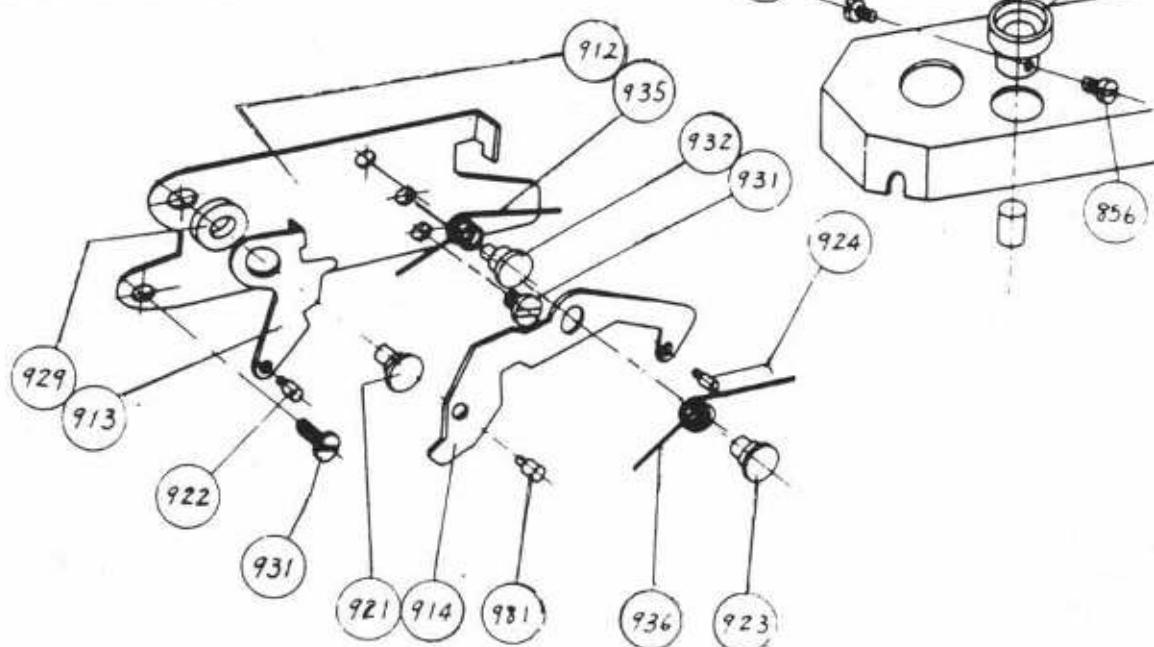

.... Delivered as a product from the Sales Department
(i.e., not supplied as repair part)

Nikkormat FTN

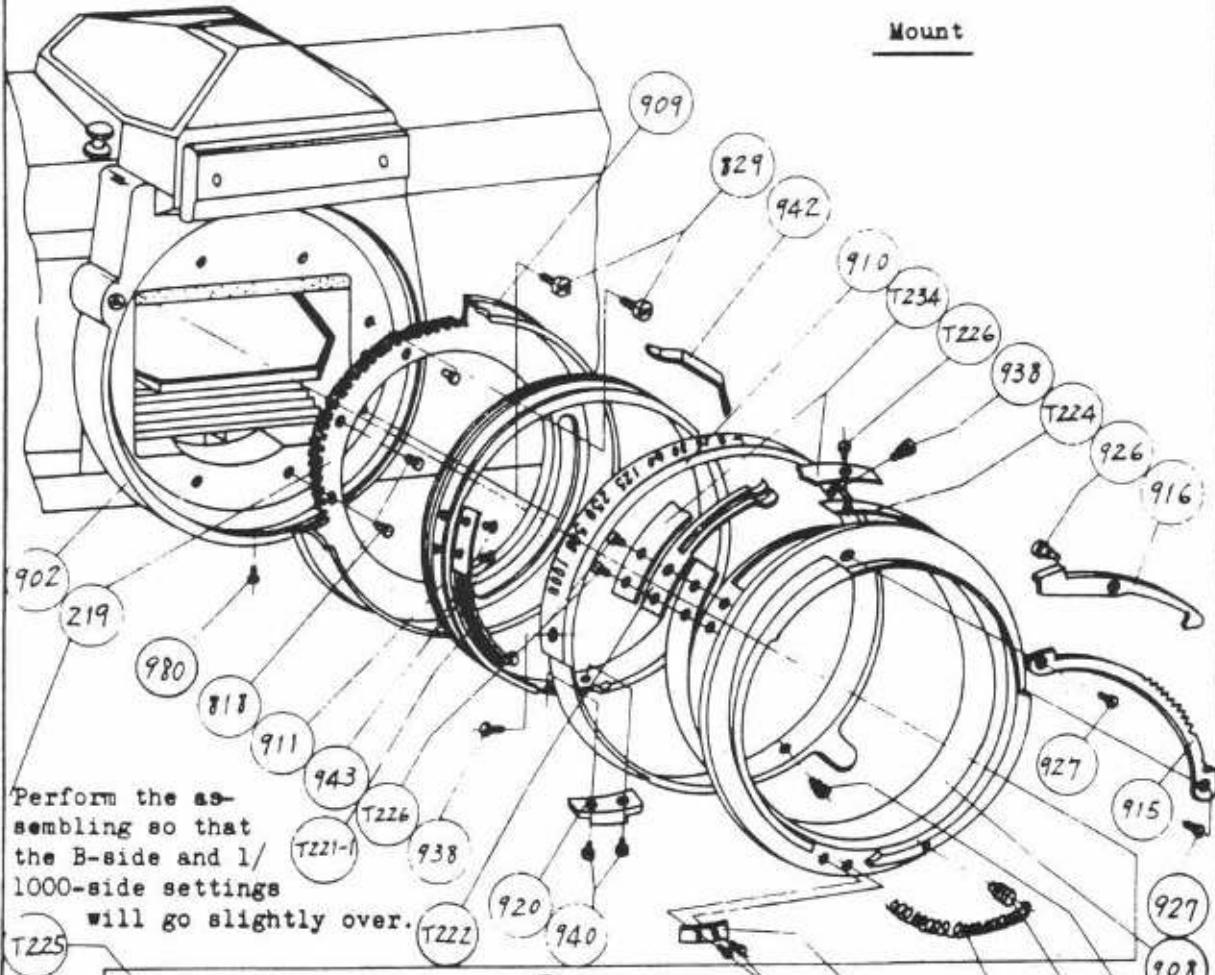

FTN - Fig. 1

Top plateRelease buttonReleasing mechanism

Mount

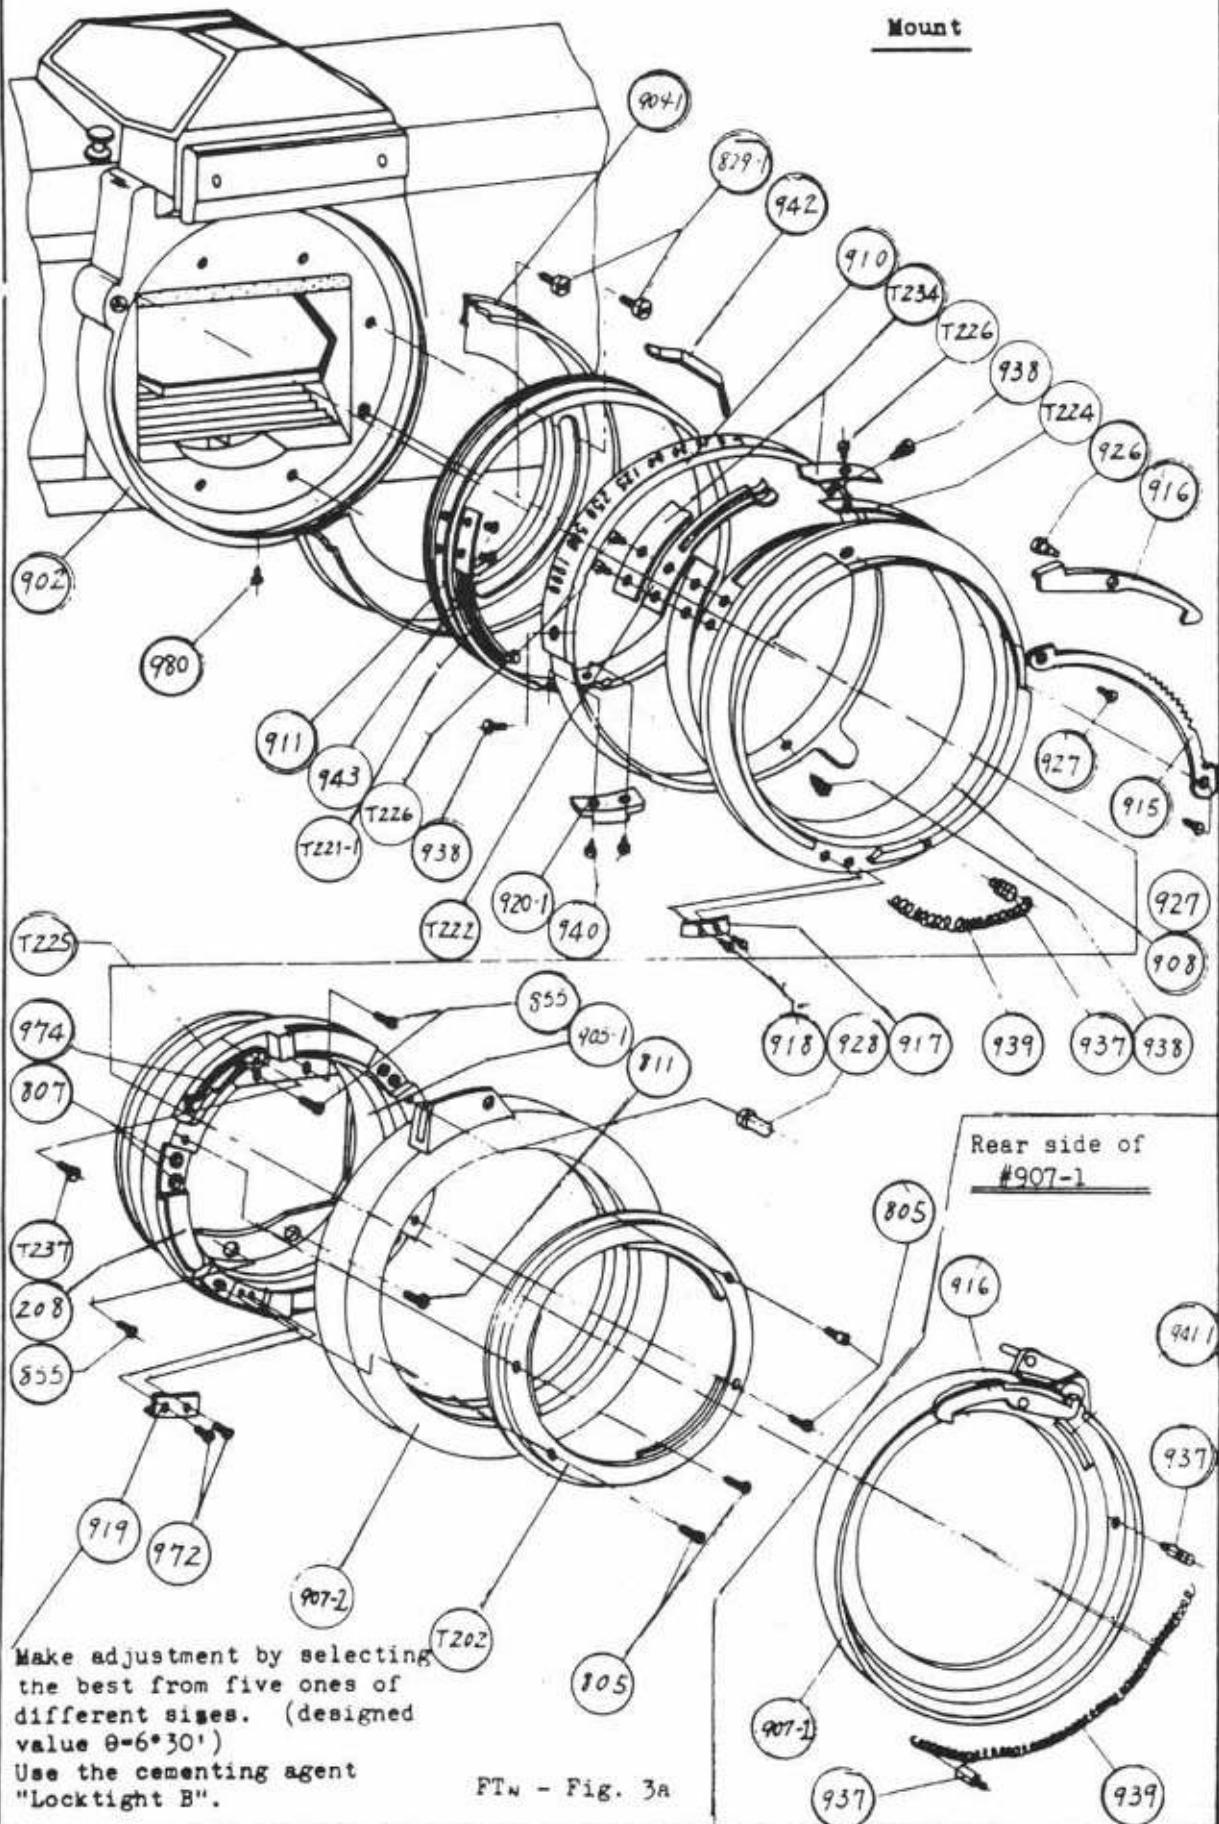

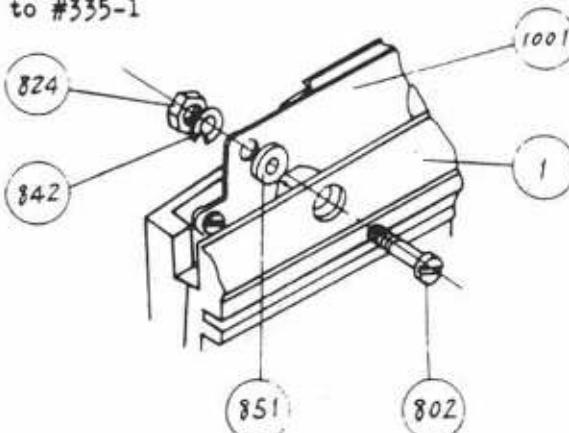

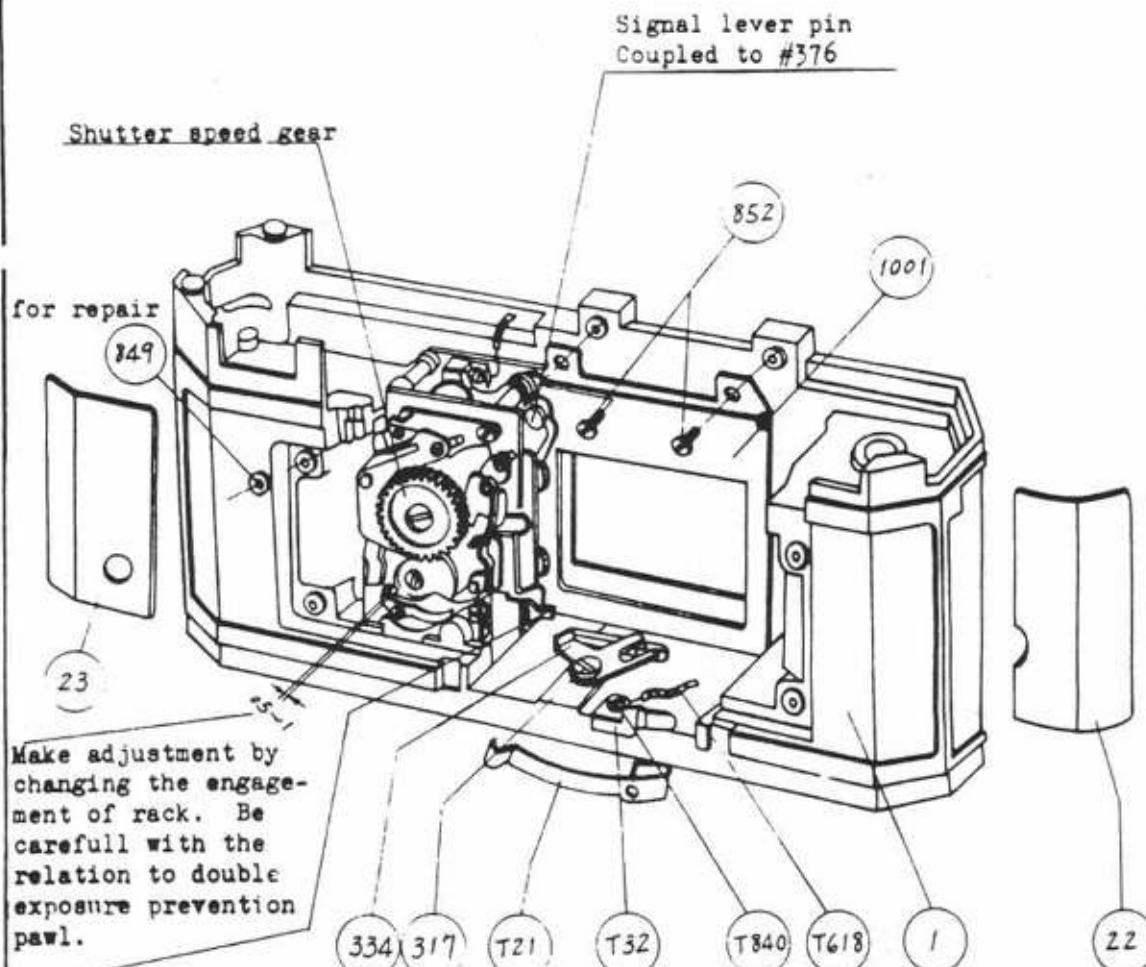

Perform the assembling so that the B-side and 1/1000-side settings will go slightly over.

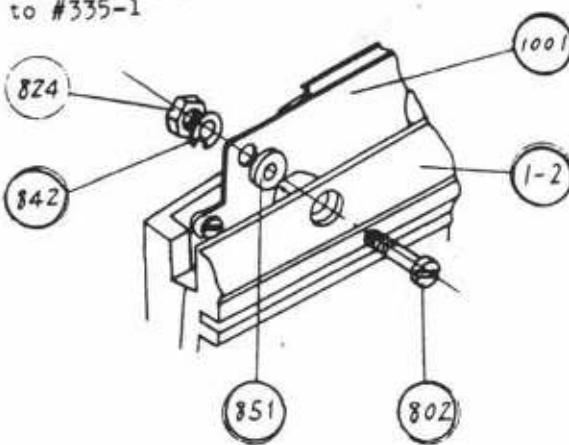

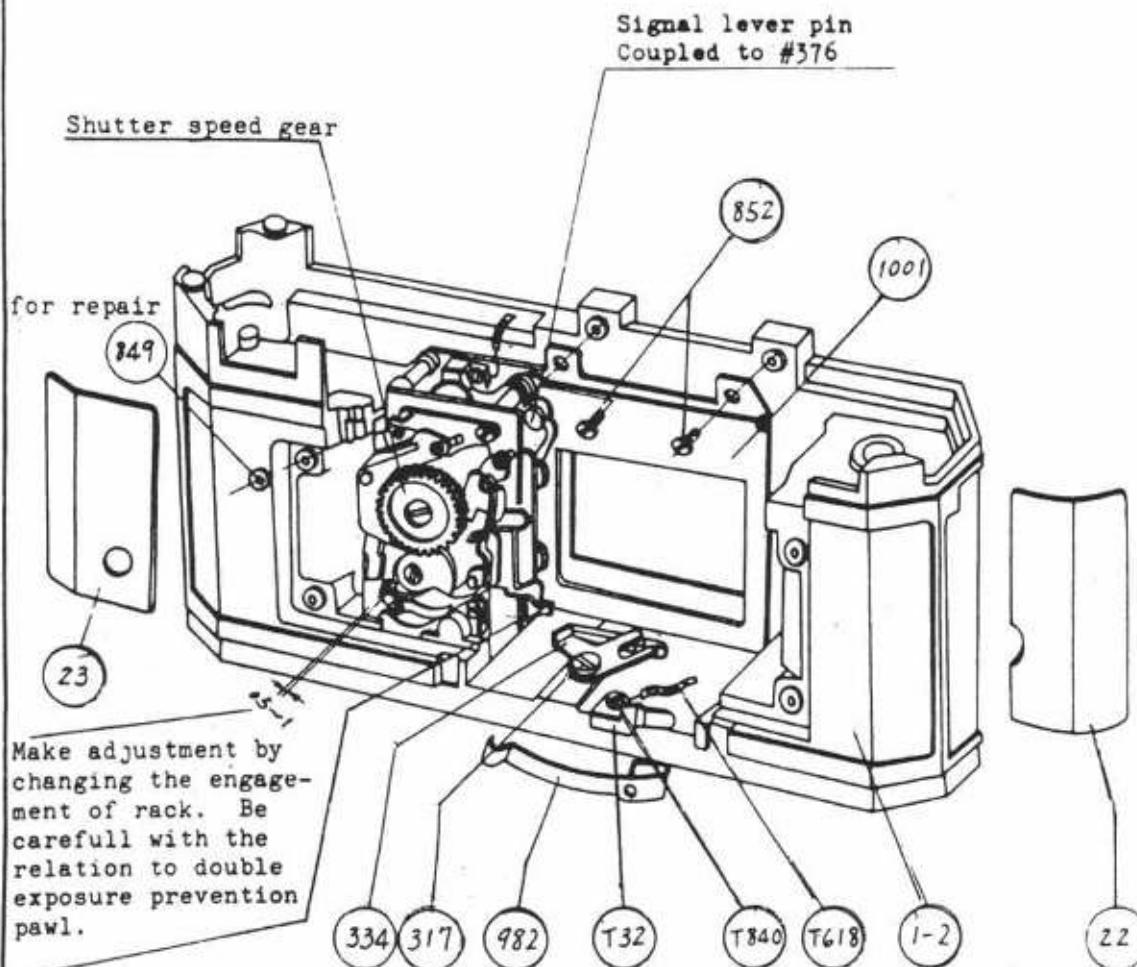

"Take adjustment by selecting the best from five ones of different sizes. (designed value 0-6°30') Use the cementing agent "Locktight B".

Left side of front plate

Adjust speed control gear on the shutter
side and #230.

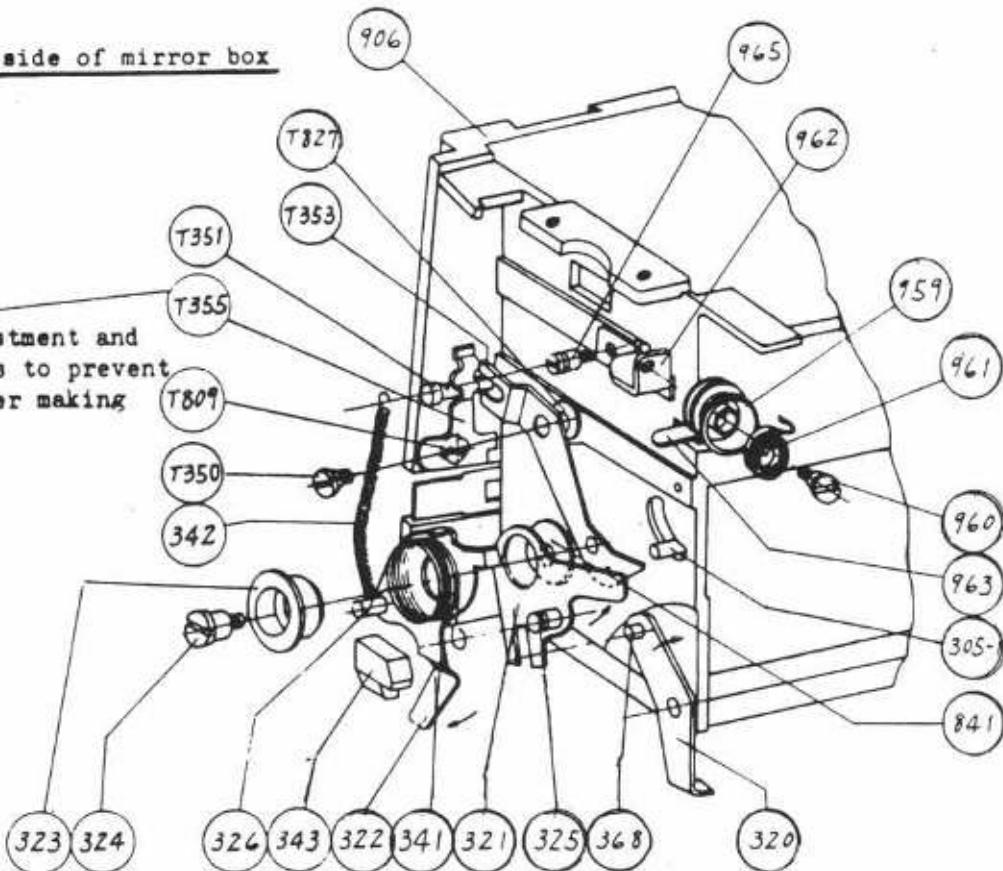

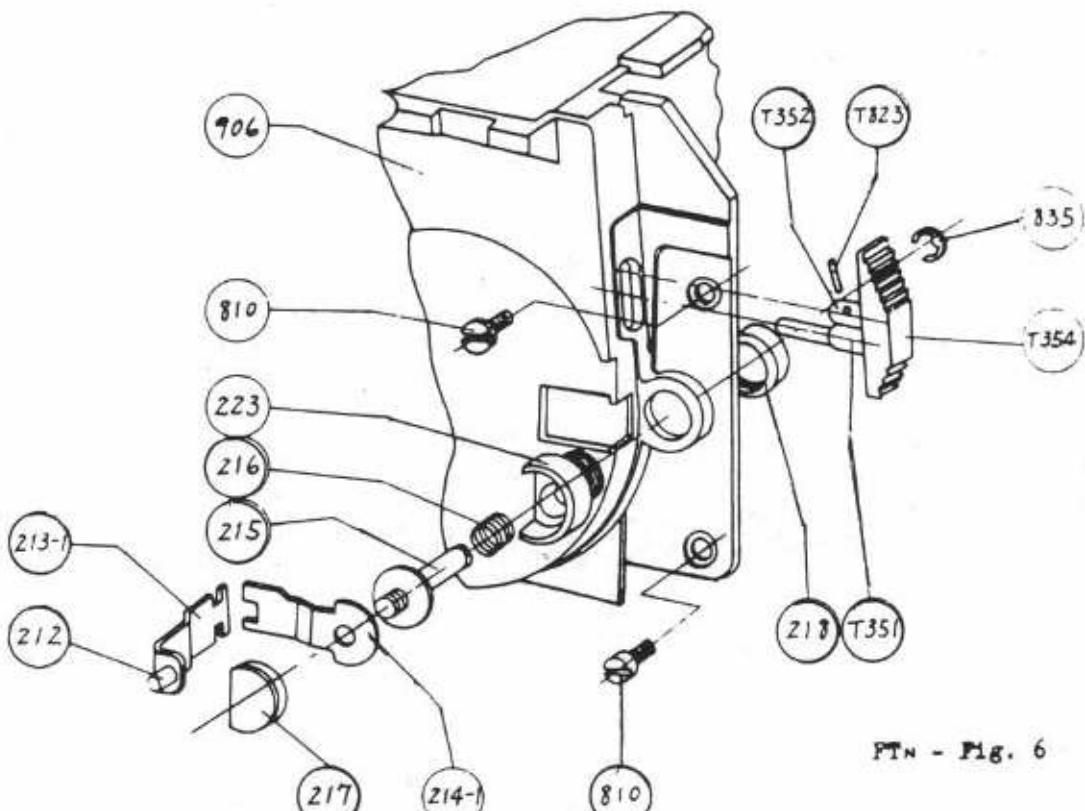

Mirror box, penta-prism

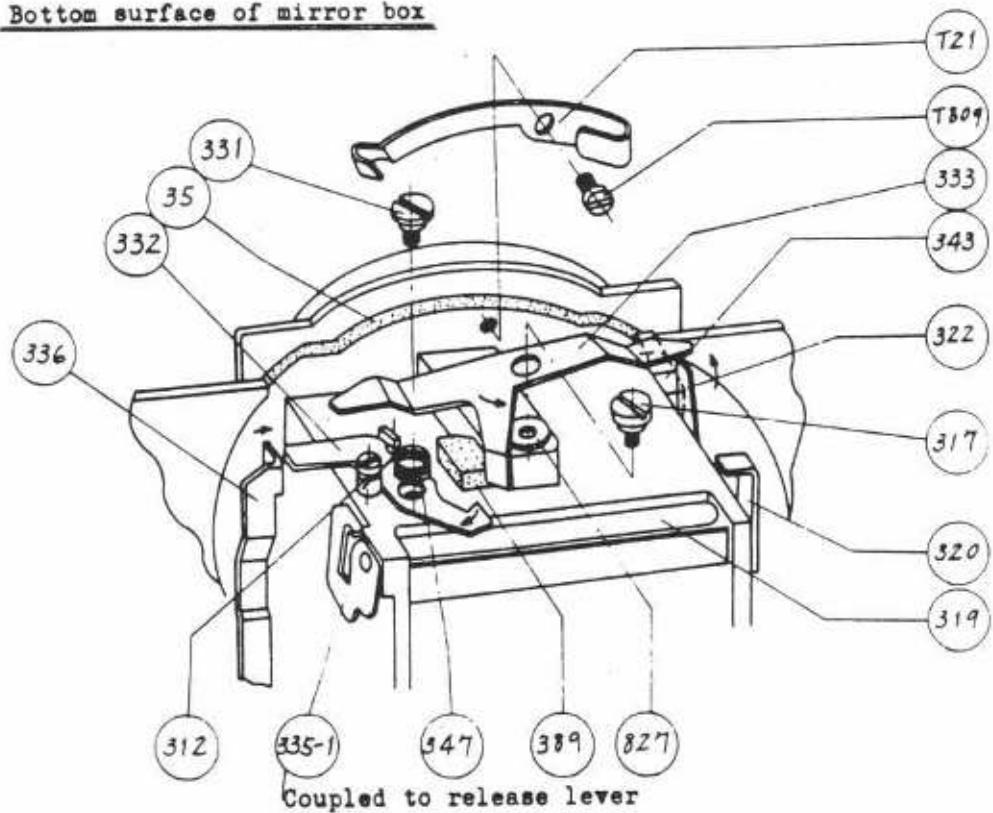

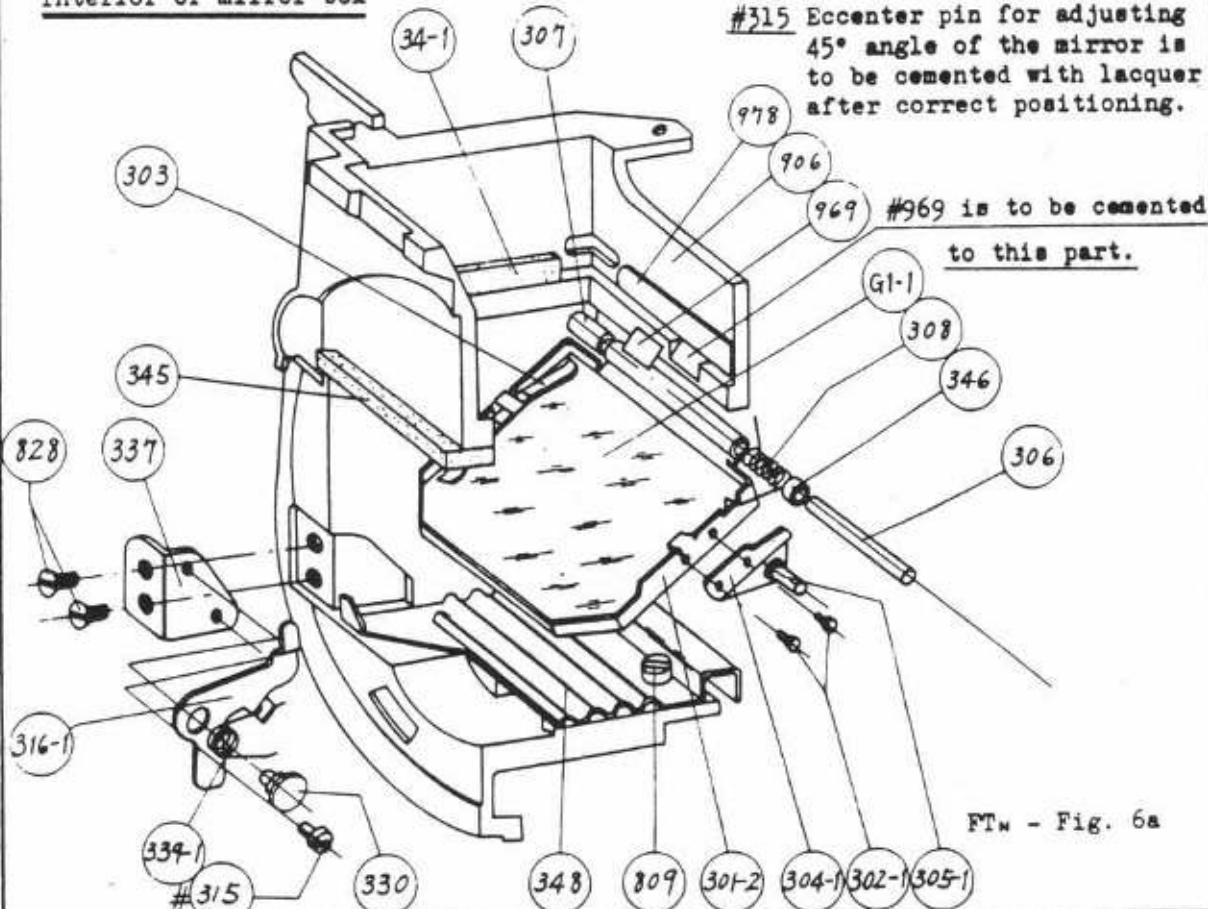

PTW - Fig. 5a

Mirror box, penta-prism

Right side of mirror box

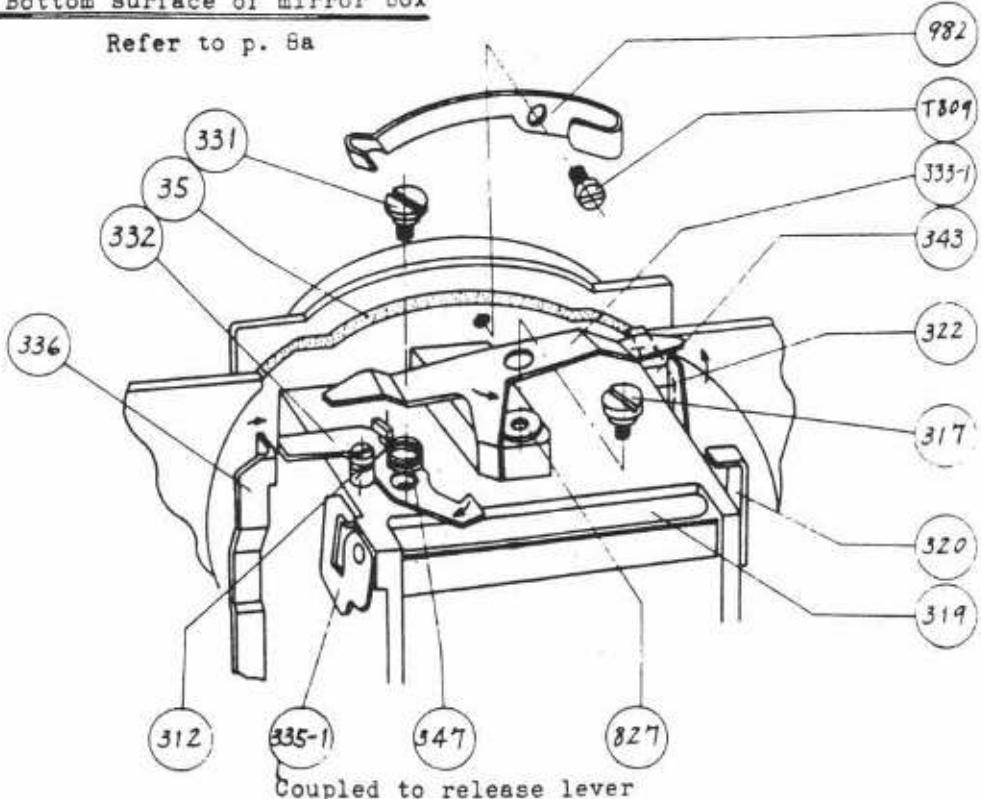

Perform adjustment and fitting so as to prevent opening, after making mirror-up.

Lens lock button and mirror-up button

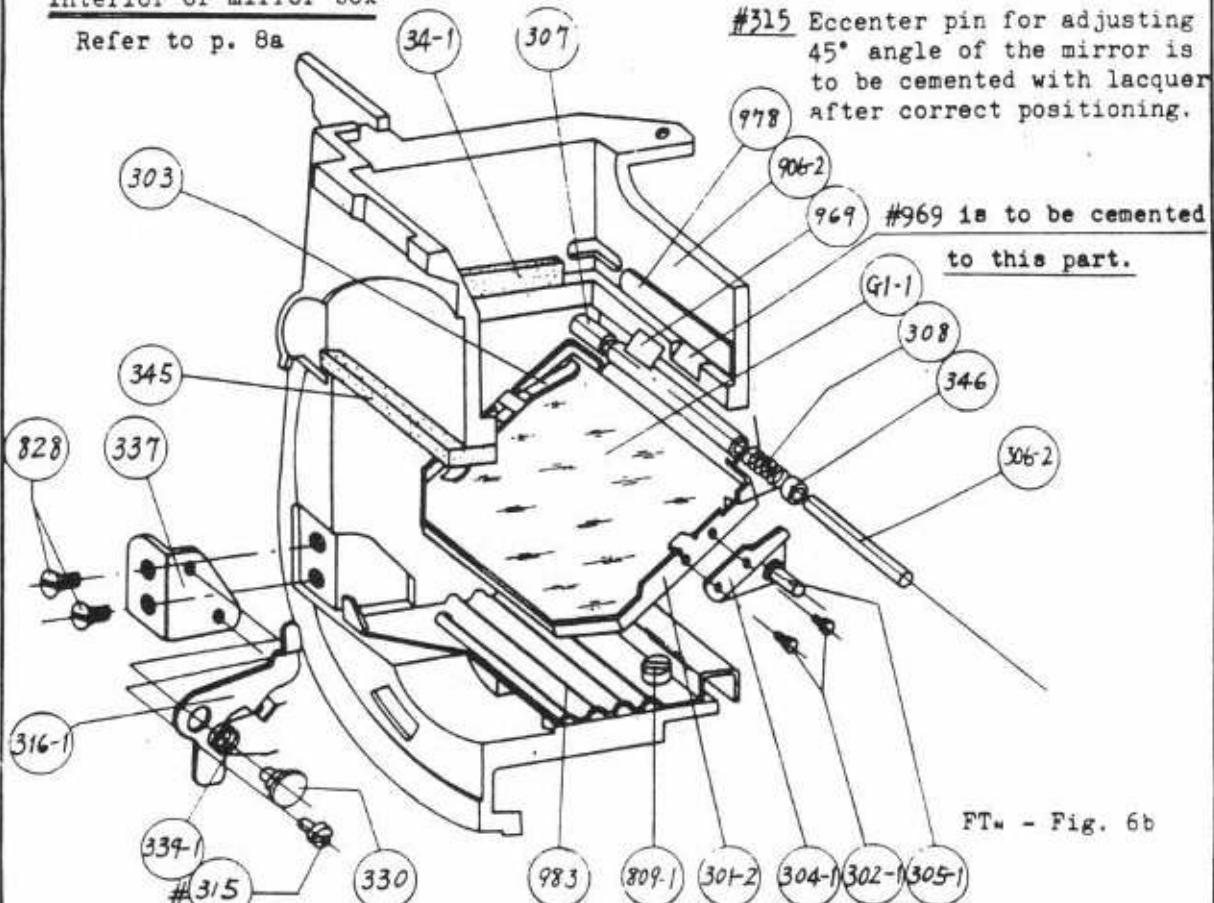

Bottom surface of mirror boxInterior of mirror box

Bottom surface of mirror box

Refer to p. 8a

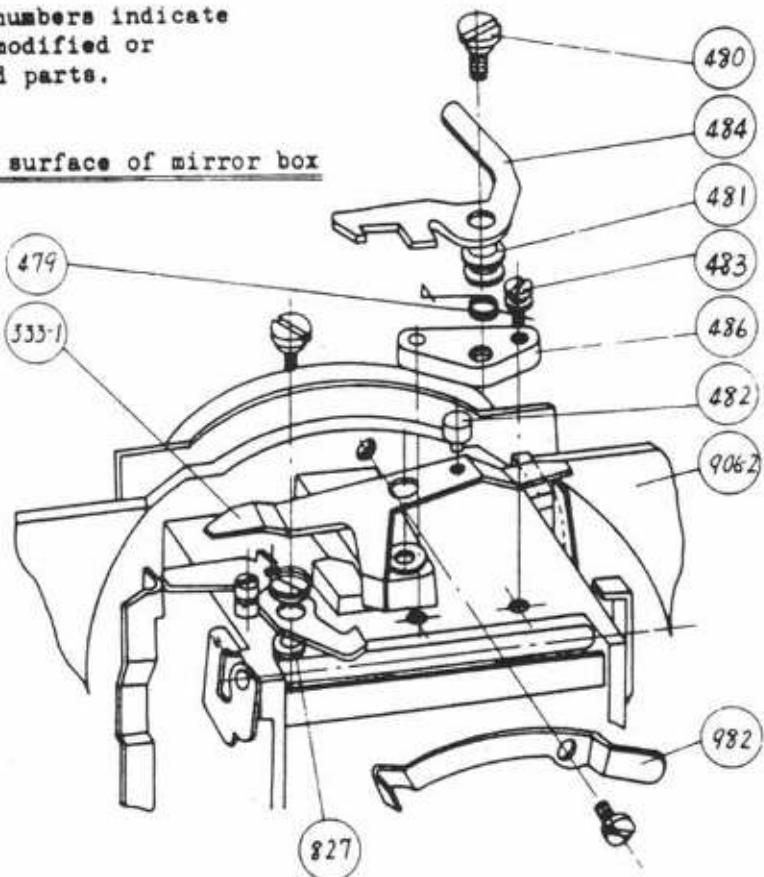

Interior of mirror box

Refer to p. 8a

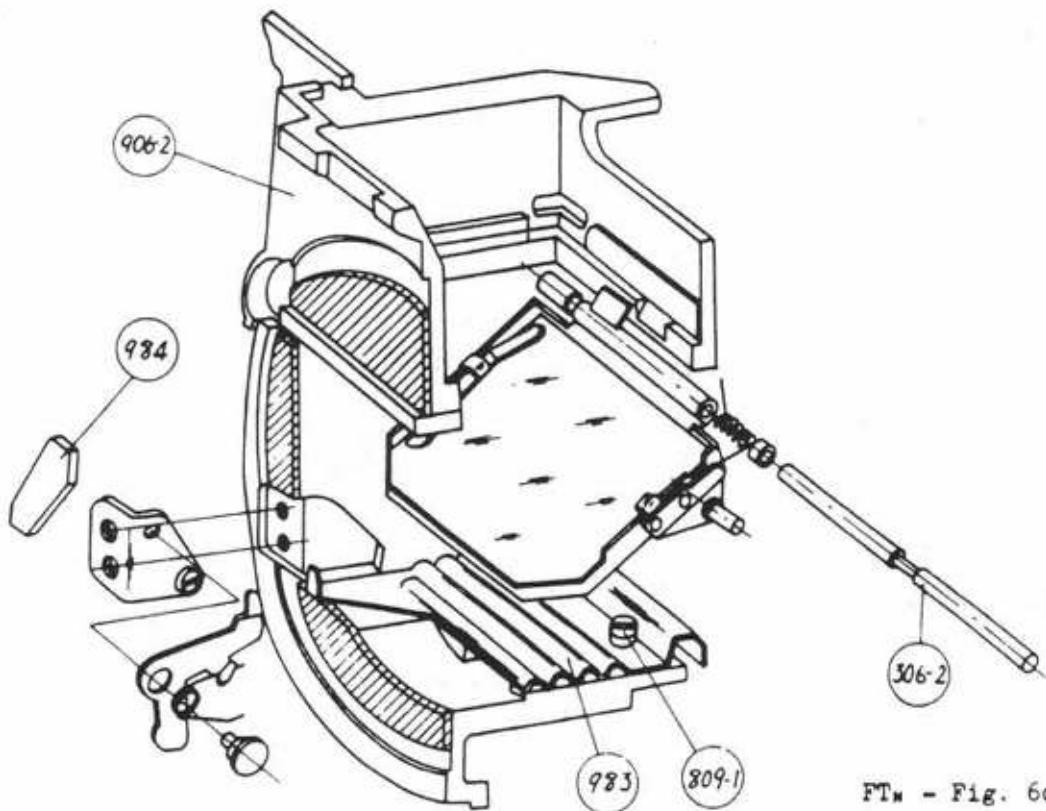

Note: The numbers indicate the modified or added parts.

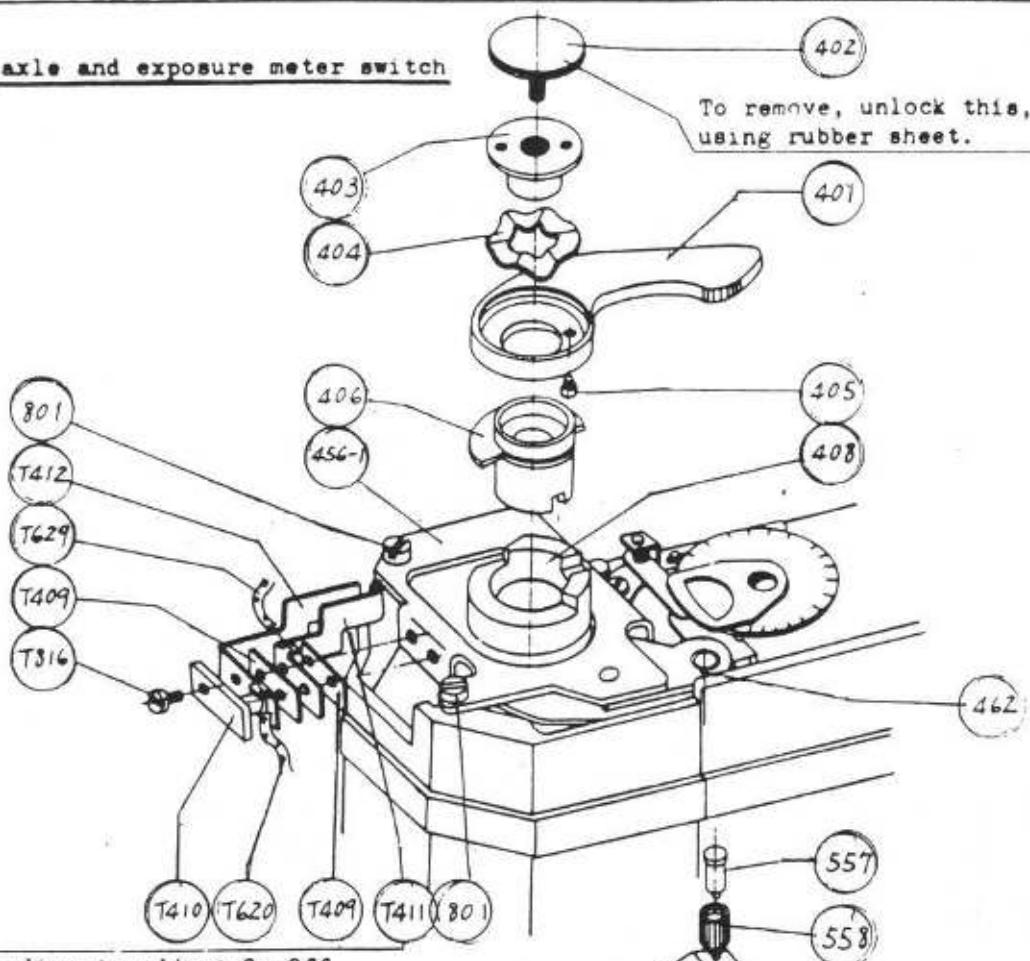

Bottom surface of mirror box

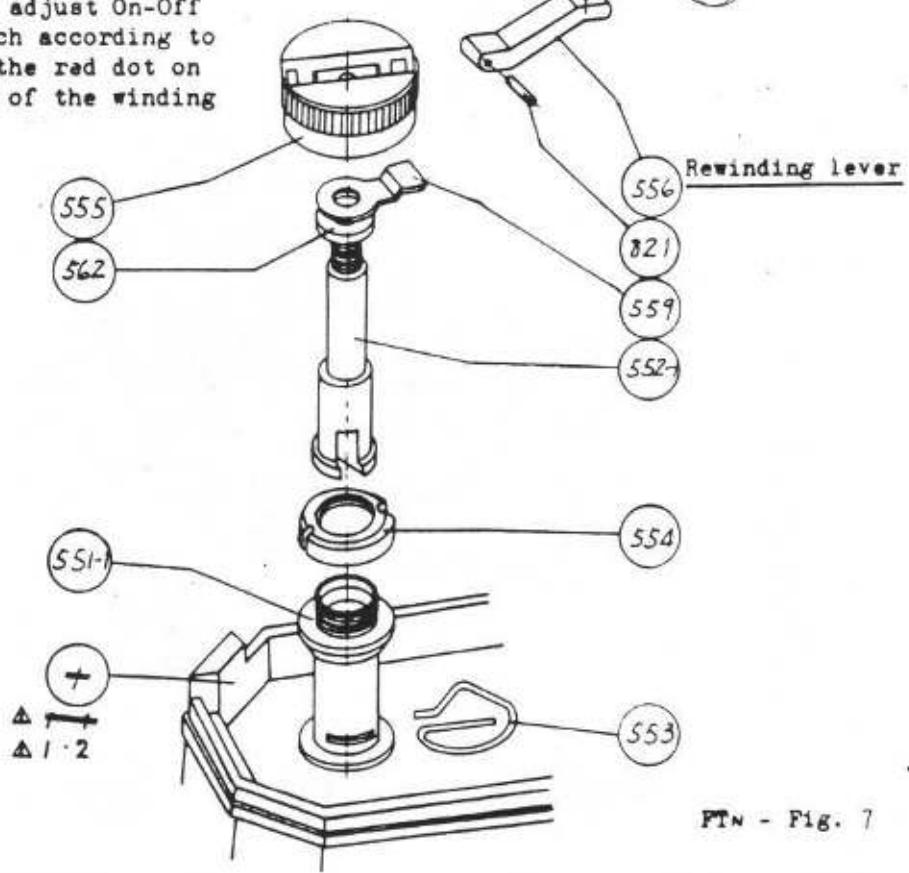

Interior of mirror box

FT* - Fig. 6c

Winding axle and exposure meter switch

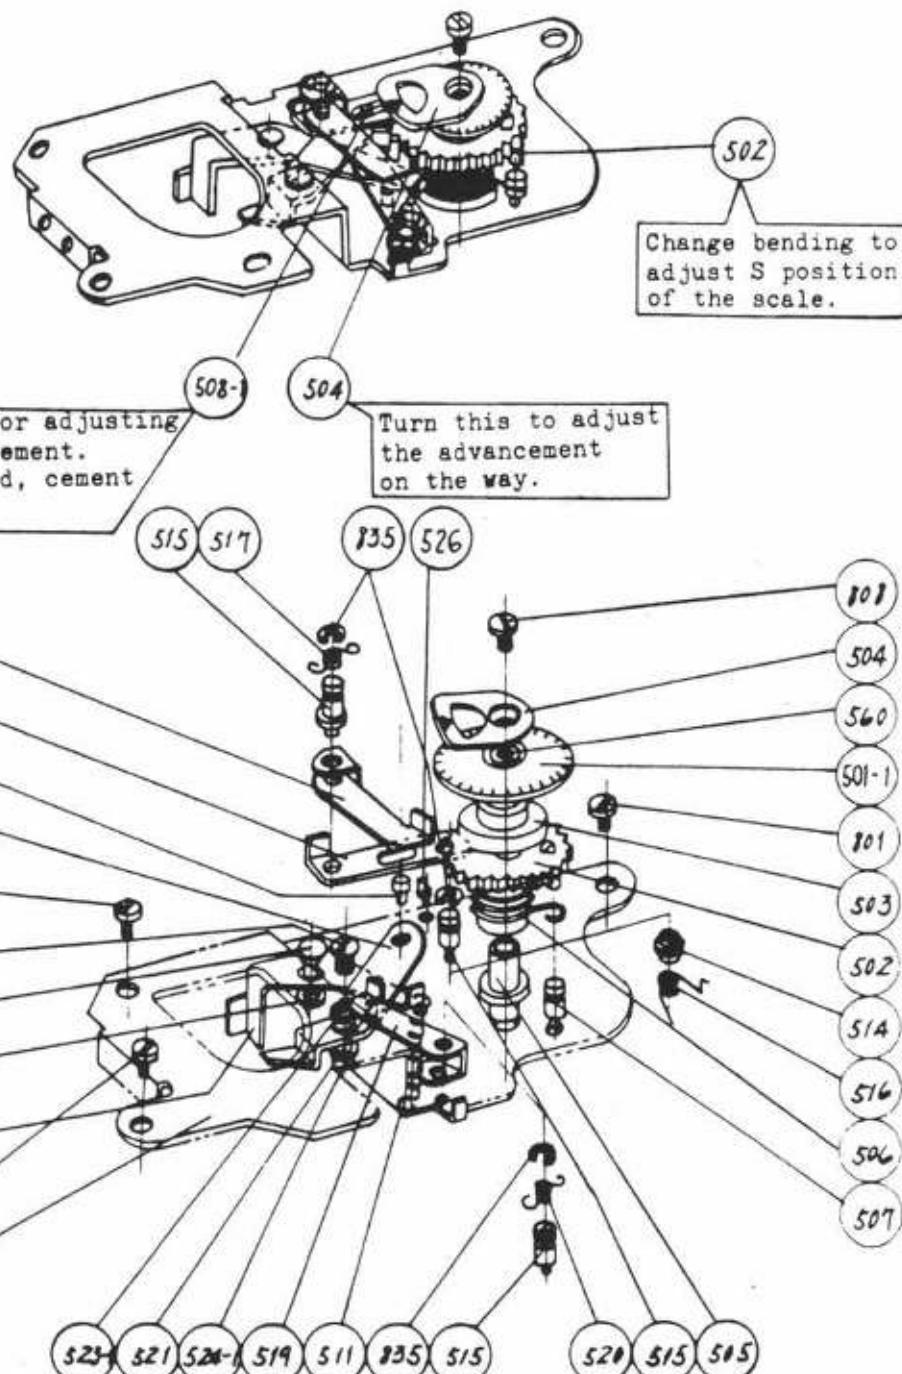

Change bending to adjust On-Off operation of switch according to the positions of the red dot on the top plate and of the winding lever.

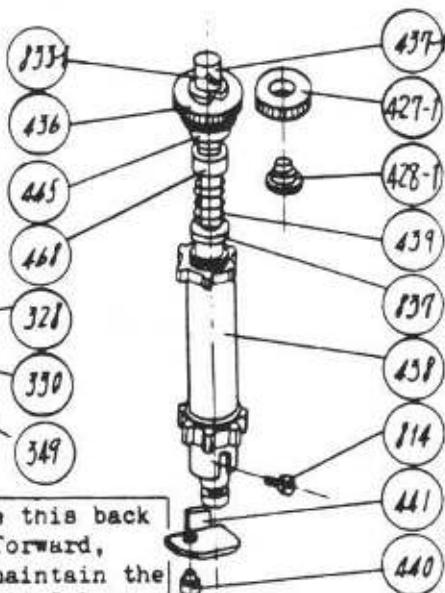

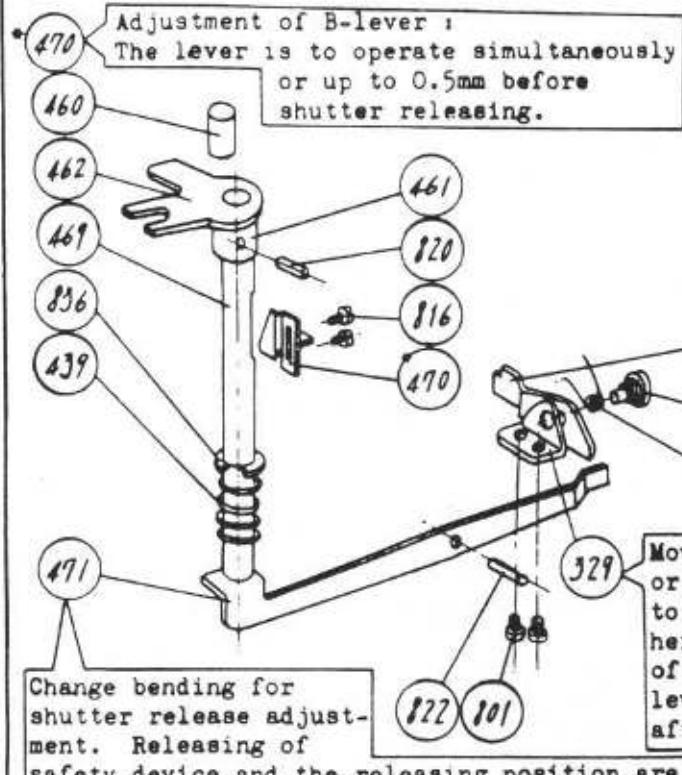

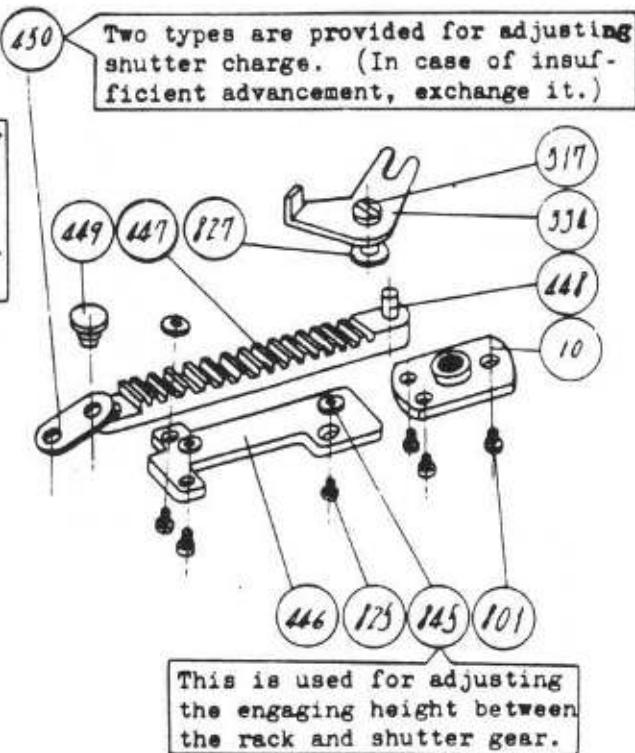

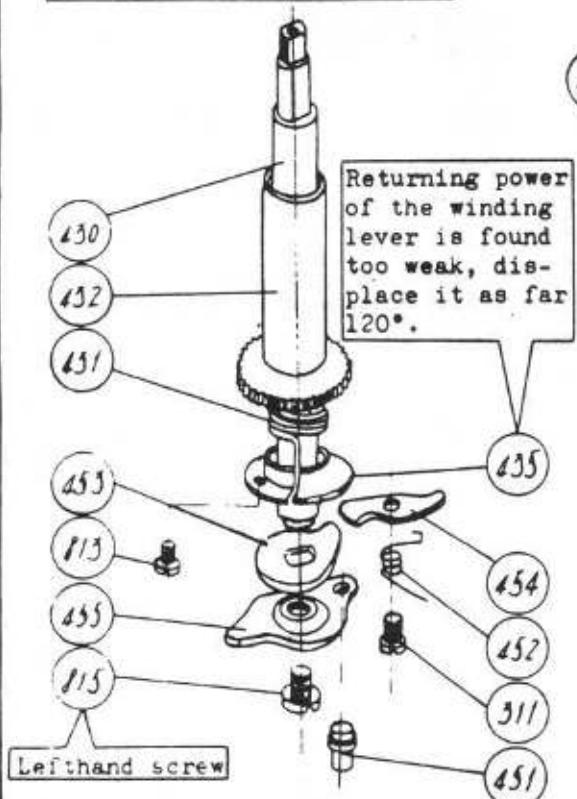

PTN - Fig. 7

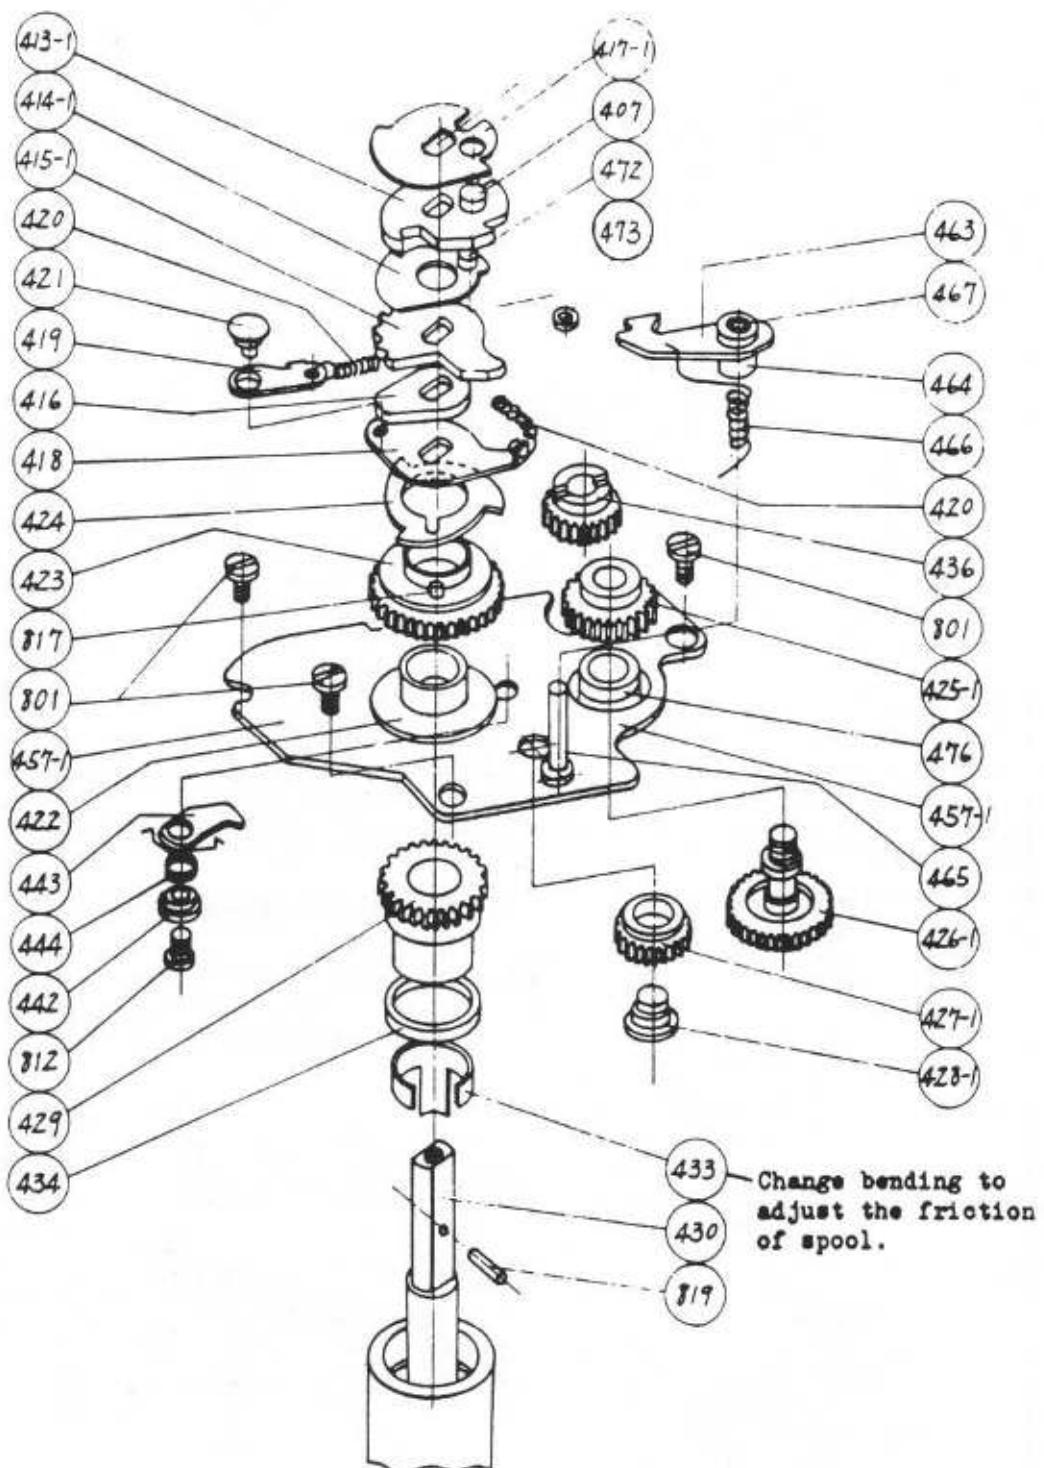

Film counter

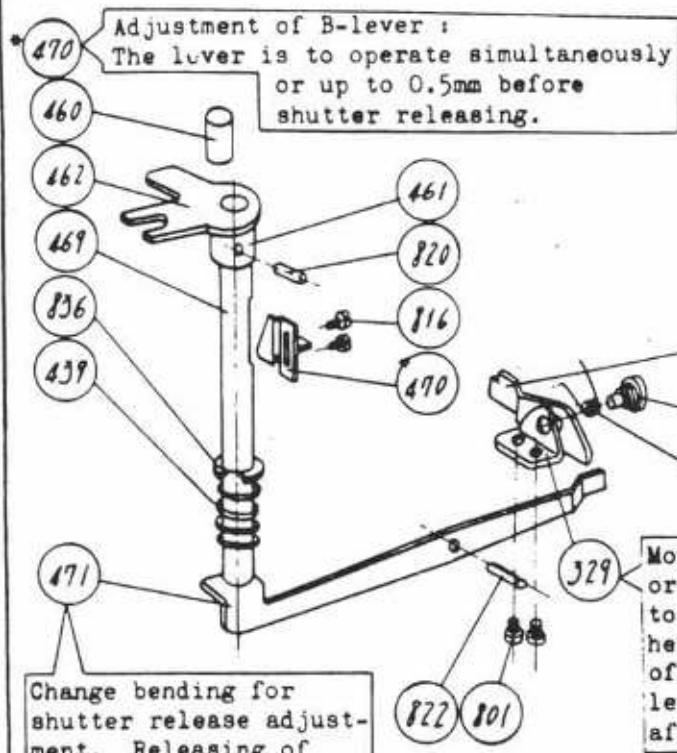

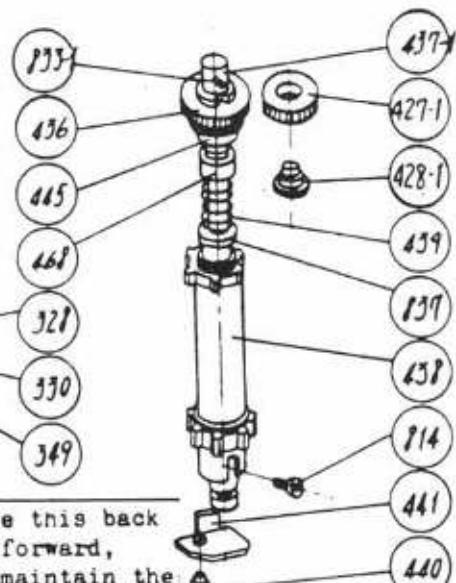

Adjustment proceeds as follows;
 Advance the scale to 10 - 20 after being assembled.
 In this position, be sure of engagement of stopper pawl #519 to the ratchet. Set index plate #504 to the scale. Then, adjust the advancement by means of eccentric pin #508-1. Open the camera back. Return the counter to zero. In this position, if any displacement is found between S and the index, make adjustment by bending the stopper part of the ratchet #502.

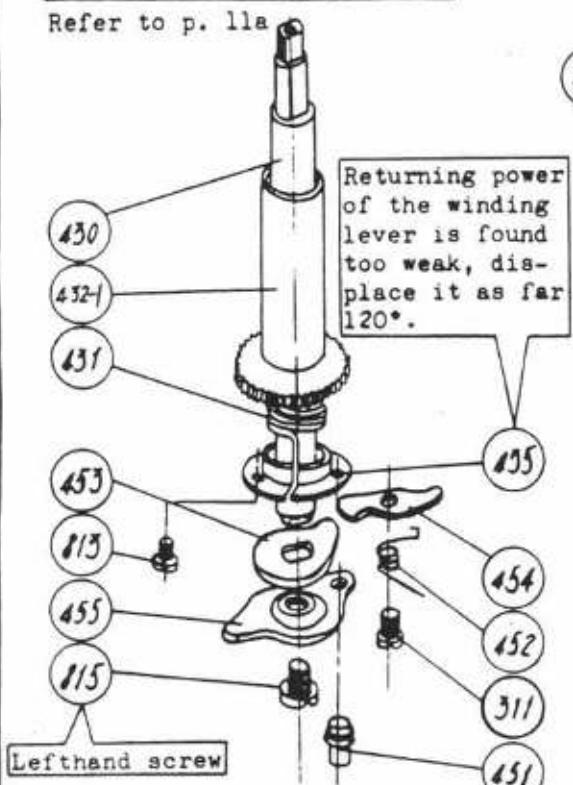

PTn - Fig. 8

Push button shaft and sec-saw leverSprocket shaftLower part of winding shaftRack plate and tripod socket

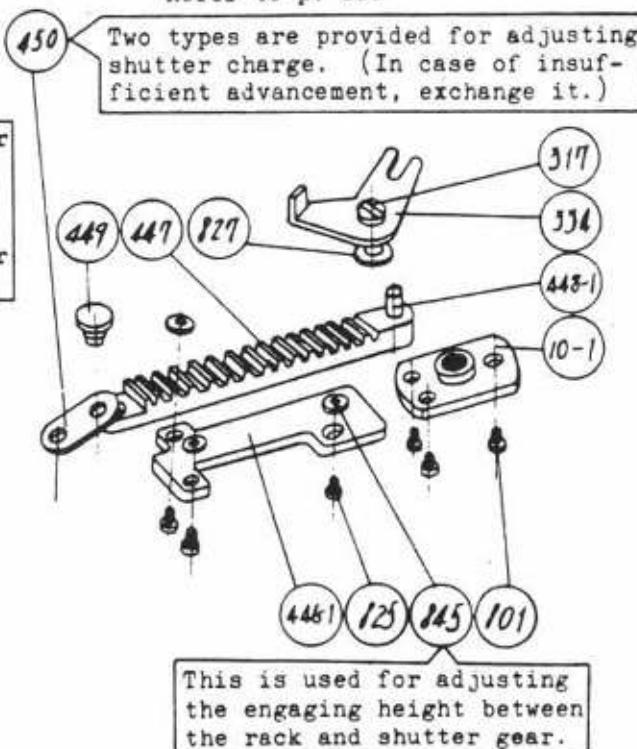

Take-up shaft and safety device

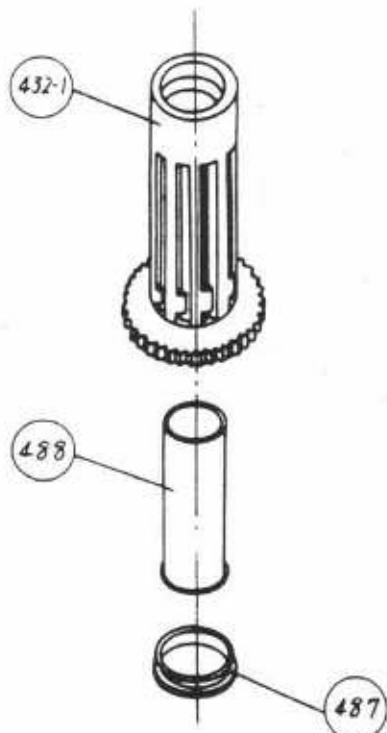

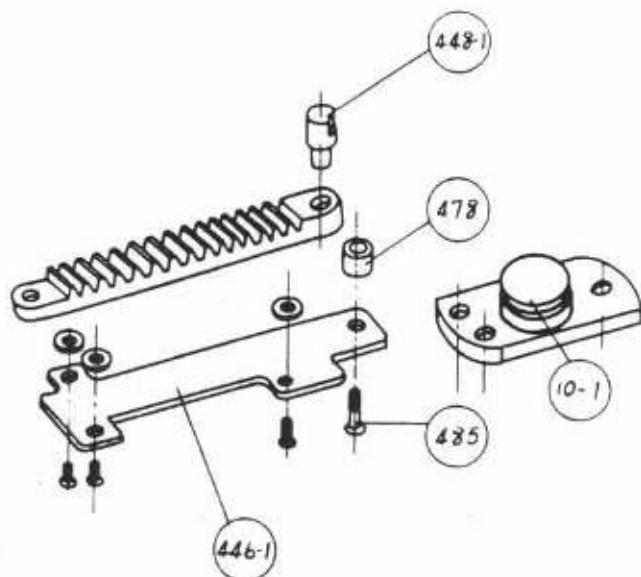

Push button shaft and sec-saw leverSprocket shaftLower part of winding shaft

Refer to p. 11a

Rack plate and tripod socket

Refer to p. 11a

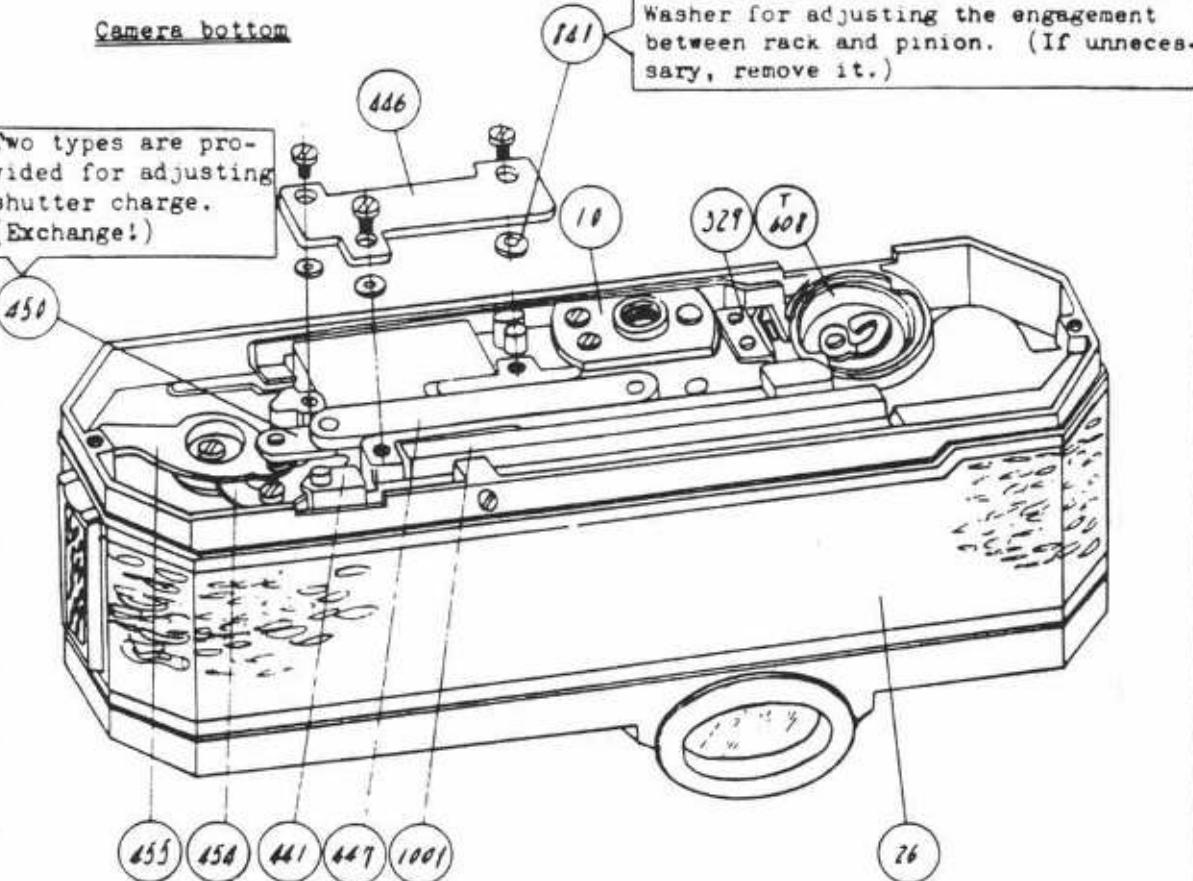

Lower part of winding shaftRack plate and tripod socket

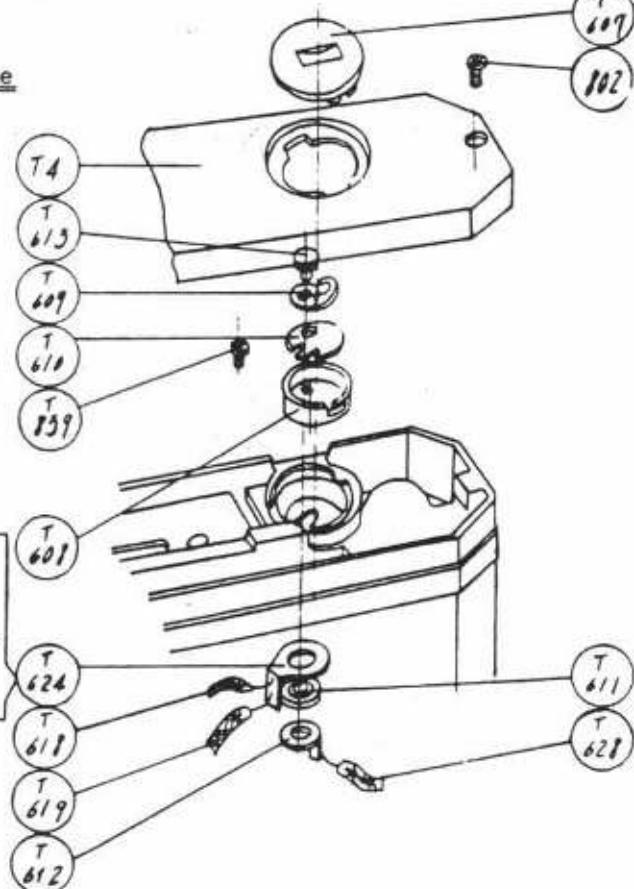

Note: The numbers indicate
the modified or
added parts.

Camera bottom

Two types are provided for adjusting shutter charge.
(Exchange!)

Battery case

To be located so as not to come in contact with large lever #²²² of mirror box assembled and operated.

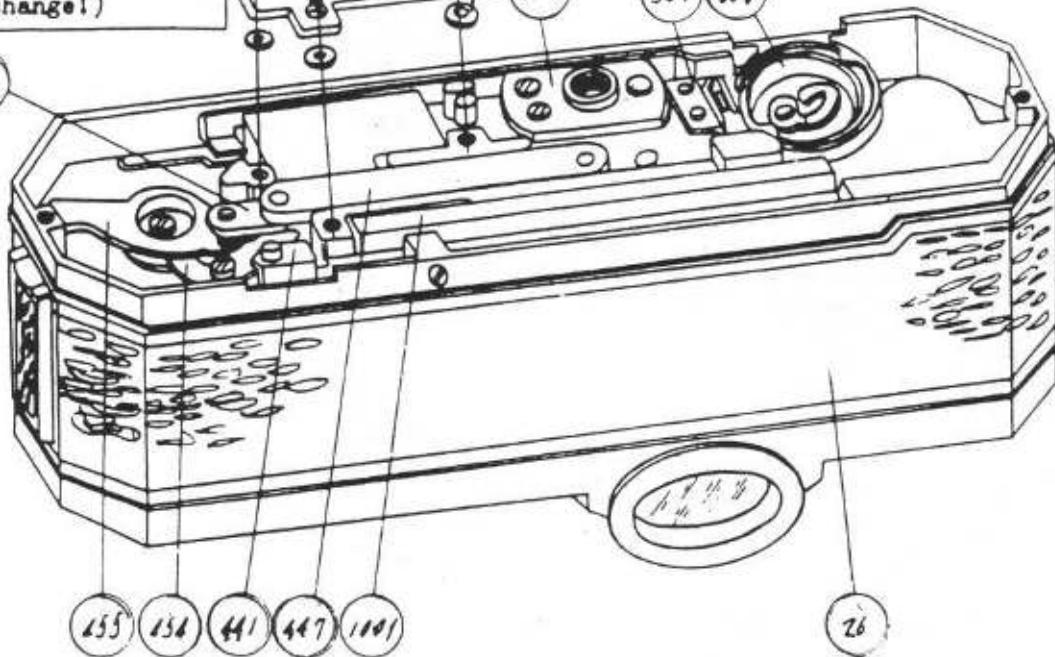

Camera bottom

Refer to p. 13a

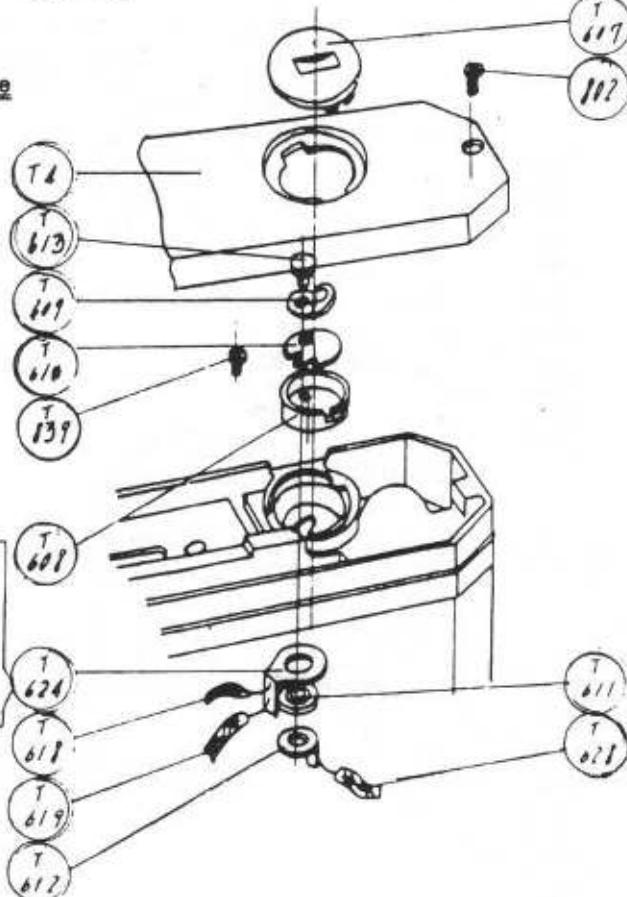

Two types are provided for adjusting shutter charge.
(Exchange!)

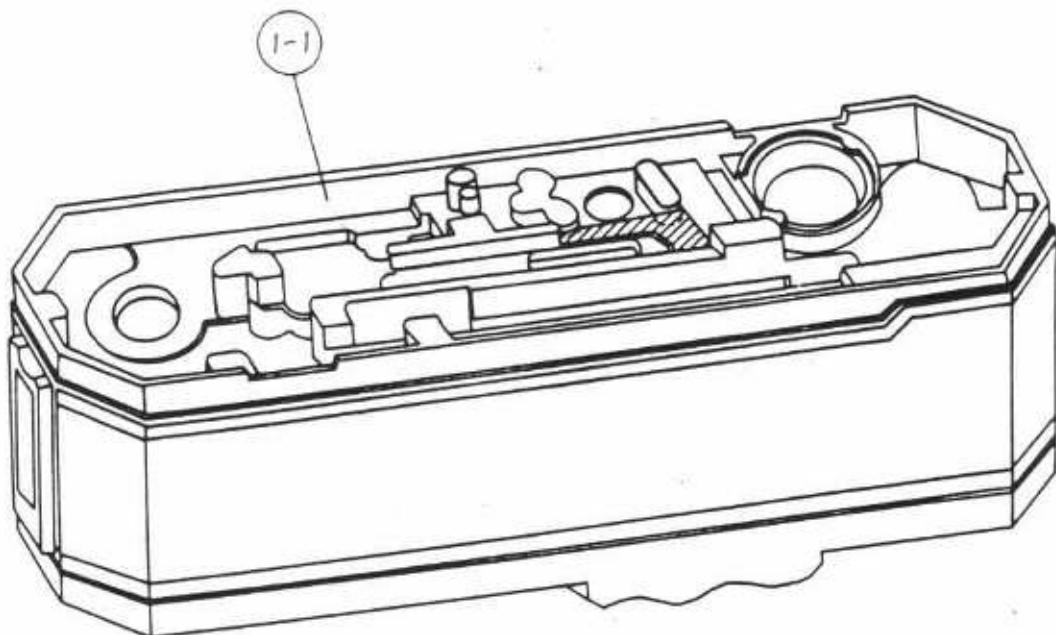

Washer for adjusting the engagement
between rack and pinion. (If unnecessary,
remove it.)

150

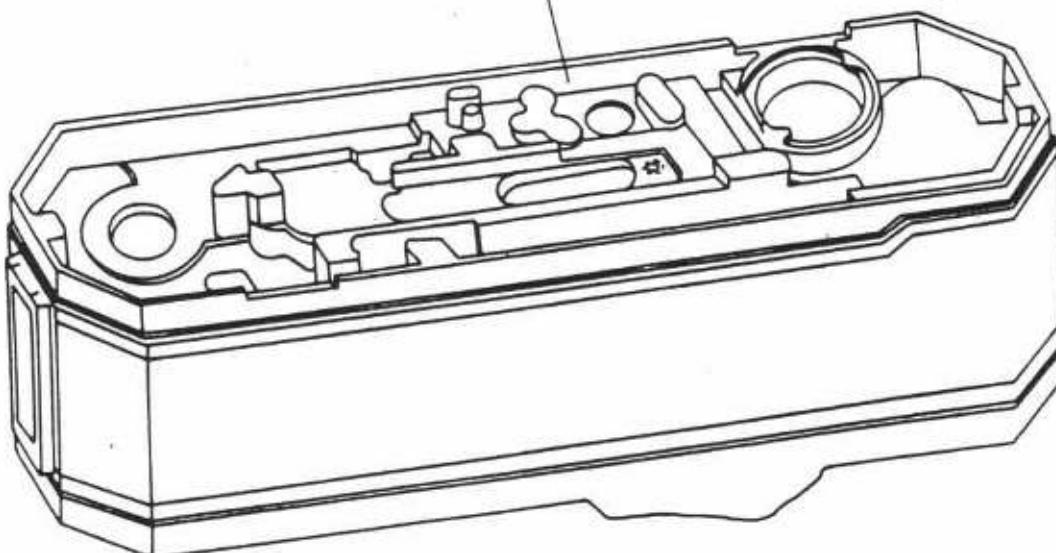

Battery case

To be located so as not to come in contact with large lever #333 of mirror box assembled and operated.

Nikkormat FT_H Exposure Meter

§ 1. STANDARDS OF MAIN PARTS

A) Resistance Characteristics of CdS Photo. Conductor #948

A - 1 Illumination - Resistance characteristics

| | 2 cd/m ² | 64 cd/m ² | 4096 cd/m ² |
|------------|---------------------|----------------------|------------------------|
| Resistance | 75.0 - 54.5KΩ | 7.25 - 5.25KΩ | 0.570 - 0.435KΩ |

B) Variable Resistor T224

| EV | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 |
|-------------|----|----|-----|------|------|-----|-----|-----|-----|-----|------|----|------|------|------|
| Upper Limit | KΩ | KΩ | KΩ | KΩ | KΩ | Ω | Ω | Ω | Ω | Ω | Ω | Ω | Ω | Ω | Ω |
| | ∞ | 15 | 5.0 | 2.35 | 1.25 | 740 | 445 | 215 | 170 | 108 | 71 | 47 | 32.5 | 22.5 | 16.2 |
| Lower Limit | 20 | 64 | 28 | 148 | 165 | 525 | 315 | 200 | 124 | 80 | 53.5 | 36 | 24.5 | 17.5 | 13 |

C) Meter #971

Current when the needle comes to the center 12.3±1μA

Swing angle 10±%

Internal resistance about 3 KΩ

Torque 0.2mε - cm/deg. or higher

D) Fixed Resistor

R: T616 40,50,60,70,100Ω

R: T626 250,400,750KΩ

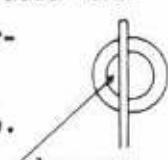

Rg T623 1, 2, 3, 3.5, 4, 4.5, 5 KΩ

§2. TROUBLE CHART

| Trouble | Cause | Checking | Remedy |
|-------------------------------|---|---|--|
| Pointer needle does not move. | 1.Batteries are not correctly deposited. | Open the battery chamber for checking | Make correction. |
| | 2.Drain on the batteries. | Check for correct voltage of batteries. | Replace the batteries. |
| | 3.Disconnection. (Not correctly soldered) | Check the circuit using the tester. | • Make connection. • Replace the disconnected part. |
| | 4.Contact on the batteries or switch is not good. | Check for correct functioning of #T608 and #T610. Check for sufficient conductivity of switch, using the tester. | • Clean the contact. • Replace the part. • Correct the bending of the contact or replace it. |
| | 5.Short-circuit | Check the circuit, using the tester. | • Replace or insulate the short-circuited part. |
| | 6.Moving part of meter is seized. | Meter needle does not move even when blown, or it stops at an indefinite position. | • Remove dust. • Replace the meter. |

| Trouble | Cause | Checking | Remedy |
|--|--|--|--|
| | 7. Moving part of meter is seized, when the meter is fitted to the camera. | The needle does not move, although it moves correctly in the meter before assembly. | Clean or replace the mirror housing window, condenser, pentaprism or meter assembly. |
| Unsteadiness of pointer needle indication. | 1. Disconnection (not always) | Check the circuit, using the tester. | • Make connection. • Replace the disconnected part. |
| | 2. Incorrect contact of variable resistor. (not always) | Check for correct pressure of contact brush. The variable resistor is worn out. | • Adjust the contact brush. • Replace the part. |
| | of switch | Check for sufficient conductivity. | Correct the bending of the contact or replace it. |
| | of battery chamber | Check for correct functioning of #T608 and #T610. | Cleaning, correct bending or replacement. |
| | | | |

| Trouble | Cause | Checking | Remedy |
|---------|---|--|---|
| | 3. Short-circuit. | Check the circuit, using the tester. | Insulate or replace the short-circuited part. |
| | 4. Moving part of meter is seized. | | • Remove dust. • Replace the meter. |
| | 5. Inadequate friction of meter needle. | The position of needle when set at EV9 differs too much from that obtained after the meter is once faced toward a brightness of EV15 and then returned to EV9. | Replace the meter. |
| | 6. Excessive slack of shutter dial. | Remarkable movement of needle within the range of the slack. | Adjust #227. |
| | 7. Unbalance of meter needle. | Indication changes over 0.3mm at the end of needle, according to the posture of the meter. | Replace the meter. |

| Trouble | Cause | Checking | Remedy |
|---|---|---|--|
| Too much difference between the indications by internal and external pointer needles. | | With the internal needle coincided with the index, see if the external one come to touch the index circle with no clearance on one side.  | Replace the meter. |
| Incorrect zero-position of pointer needle. | | Even when switched off, the needle does not go out of the frame. | Replace the meter. |
| Even with the cap put on, the needle moves. | | Set the needle to EV-3, put on the cap and switch on. The needle swings close up to the index. | Replace R . Choose a resistance high enough to get the needles within $\pm 1/2$ step. |
| Pointer needle is swung out. | 1.The needle is adhered. | The needle moves normally when subjected to vibration. | Replace the meter. |
| | 2.Insufficient conductivity of the shunt circuit. | Check for correct contact of #T222. | Replace the part. |

2000 1 2 3 4 5 6 7 8 9

| Trouble | Cause | Checking | Remedy |
|------------------------------|--|--|------------------------------------|
| | 3. Short-circuit on the printed wiring plate. | Check short-circuit on the lead wire, resistor and soldering points. | Insulate the short-circuited part. |
| Inaccuracy of indication. | 1. Drain of batteries. | Insufficient swing of needle on the whole range. Check the voltage. | Replace the batteries. |
| | 2. Aging or the like of CdS, variable resistor meter, or fixed resistor. | Although the movement needle is normal, high accuracy is not obtained. Check every part individually. | Replace the part below standards. |
| Loosening of ASA ring lock. | #T203 or #T209 wears down. | ASA ring moves unintentionally. | Replace the part. |
| Incorrect click of ASA ring. | Notch on #T203 is worn out. #T236 is broken. | Stop-down measuring click does not operate securely or at all. | Replace the part. |

§ 3. DISASSEMBLING PROCEDURES OF THE EXPOSURE METER

- 1) Release #402, using a piece of rubber sheet to remove #40¹, #404 and #401. (Use the screw driver J1102C)

Thereafter, remove #555 and #559 as well as #554 and #930.

(Use the screw driver J11022)

Taking care of the synchro cord, push up the top plate of the camera gently and unsolder the parts.

- 2) Meter

Draw out #551-1.(Use the screw driver J11021)

Unscrew #T813 (meter setting screws)

Put it out carefully, taking care of the meter pointer needle and of the index.

- 3) Switch

Remove #T816.

- 4) Printed wiring plate.

Remove #T846.

- 5) Variable resistor

Unscrew four screws #811.

Holding #910 (shutter ring), remove #21³ and #214, to detach the whole bayonet part. Then , remove #910, #907-1 and #908 from the bayonet in this order.

Note 1. When detaching the bayonet part from the front plate, take caution not to disconnect #T621 (green colored cord).

Note 2. For removing #908 , draw it out after bringing #T222 (brush) up to the position of the notch on the #905.

- 6) CdS cells

Unsolder the printed wiring plate.

To remove the CdS cells, take them out by the flange of the sealed case, using the end of a screw driver.

§ 4. MEASUREMENT OF EACH PART OF METER

1) CdS cells

Disconnect all the wirings except for the CdS cells from the printed wiring plate. Take measurement of the parallel-connected resistance of the CdS cells. If the measuring result is not within the Standard §1.A - 1, replace one or two of the cells.

For measurement, use the standard lens 50mm/1.4 (J18011).

Note: The above measurement should not be affected by the brightness of the surroundings.

2) Variable resistor

Connect the ends of #T619 and #T621 to the tester to measure the resistance.

Replace the resistor which is remarkably out of the standard.

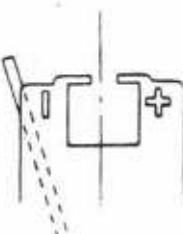

For the measurement, the slack of the shutter gear is to be adjusted to a minimum or to be brought to either side.

Use the standard lens 50mm/1.4 (J18011) for the measurement.

3) Meter

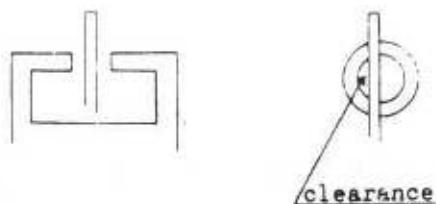

3) - 1 Position of the zero point

The pointer needle should move beyond the negative (-) mark of the bracket.

3) - 2 Displacement of the pointer needle

When the pointer needle in the finder is brought to the center, the top needle should have clearance on either side in the index ring (See Fig.).

4) Fixed resistor

Measure the resistance of each fixed resistor, using the tester.

§ 5. ASSEMBLING OF THE EXPOSURE METER

1) Variable resistor

Reverse the disassembling procedures mentioned in § 3 - 5), that is, fit #T203, #T204 and #T205 to #T201. Then, pass the green cord (#T621) through the hole in the front plate. Putting #213 into #214, gear up #000-1 with #229.

Note: Adjust the slack on the shutter dial by means of #227.

At the same time, assure the short-circuit between the positions EV-2 and EV-3, with a clearance made at either end of the resistor against both the stoppers at B and 1/1000 sec.

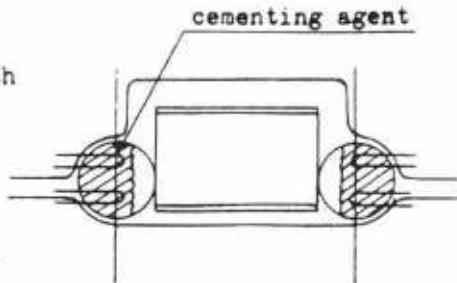

2) Meter

Set the mirror box in place, taking care of the pointer needle and the index.

Note: Viewing into the finder, fasten #T815 tightly, so that the index frame becomes parallel to the viewfield frame.

3) CdS cells

Put the CdS cells into #T359-1, with the side not coated with cementing agent faced inside, and at the same time attach the two lead wires vertical at their base, with lacquer.

4) Printed wiring plate

Do not fasten #T846 too firmly.

§ 6. ADJUSTMENT OF THE EXPOSURE METER

In principle, the exposure meter is to be adjusted by means of the fixed resistors R_1 (T616), R_2 (T626) and R_G (T623), and not by means of adjustment of the filter on the CdS or that of the sensitivity of the meter. However, if need arises, the filter #132 for the Photomic-T can be used.

Replacement and readjustment are also carried out in the following way:

First, make temporary wiring.

It will be convenient to begin with

$R_1 = 50\Omega$, $R_2 = 1\text{ k}\Omega$ and $R_G = 3\text{k}\Omega$, although any of R_1 and of R_2 within the range (see p.) can be taken.

- 1) Facing the meter toward the brightness of EV9, adjust the R_G until the pointer needle comes to the center.
- 2) Facing the meter toward the brightness EV15, observe the accuracy. If the indication remains within $\pm 1/2$ step (in terms of the aperture of the lens), leave it. If the needle swings too much, increase R_1 . If the swing is not sufficient, decrease R_1 . However, it is desirable that R_1 be as large as possible within the range of $1/2$ step.
- 3) Facing the meter toward the brightness EV4, observe the accuracy. If the indication is within $\pm 1/2$ step, leave it. Too large swing needs the increase of R_1 and conversely, too little swing requires the reduction of R_1 . It is desirable that the swing be as large as possible within the range of $\pm 1/2$ step.

Note: In adjustment, take care to prevent the brightness of the surroundings from affecting the CdS.
